**Detailed Action**

1.) The specification is objected to for mentioning claims by number, for example at page 2. Since the content and numbering of the claims can change during prosecution, mentioning claims by number in the body of the specification is discouraged. Applicant should review his specification for instances of claims mentioned by number and should delete the same.

2.) The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3.) Claims 21 and 22 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. Claim 21 calls for a “balancing pulse” to be imposed on the welding current for “calculation purposes”. The specification does not describe what a “balancing pulse” is or how to make calculations on the basis of a balancing pulse in such terms as to enable an artisan of ordinary skill to make and use the invention. Claim 22 calls for using an arc characteristic curve for calculating the interference variables. The specification does not describe how to use the arc

characteristic curves to calculate interference variables in such a way as to enable one skilled in the art to make and use the invention.

4.) The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5.) Claims 1-20 and 24 are rejected under 35 U.S.C. 102(b) as being anticipated by Tabata et al. (5,043,557). Figures 1-3, 12, and 13 and the discussion at columns 6-12 in Tabata et al. disclose a method of detecting welding process voltage wherein the inductance and resistance of the welding cable is corrected for in the same manner as set forth in the claims.
